

Task Title: Calculate Time to Fill Pool Using Different Hoses

OALCF Cover Sheet – Learner Copy

Learner Name: _____

Date Started: _____

Date Completed: _____

Successful Completion: Yes ☐ No ☐

Goal Path: Employment ☐ Apprenticeship ☐

Secondary School ☐ Post Secondary ☐ Independence ☐

Task Description: The learner will calculate the volume of, and cost to fill a round pool, then calculate how much time it will take to fill when using different sized hoses.

Main Competency/Task Group/Level Indicator:

- Understand and Use Numbers/Manage money/C1.2
- Understand and Use Numbers/Manage time/C2.2
- Understand and Use Numbers/Use measures/C3.2

Materials Required:

- Pen/pencil and paper and/or digital device
- Calculator or digital device with calculator function

Learner Information

Many people set up backyard pools in the summer. Calculating the amount of time and cost to fill a pool is important when budgeting for this expense.

Scan the volume formula for round objects and the dimensions of the round pool.

Formula

Volume of circular or round objects = $\pi r^2 \times \text{height}$

$$\pi = 3.14$$

r = radius (1/2 of the diameter of the circle)

Round Pool

Diameter: 26 feet

Depth: 4 feet

Work Sheet

Task 1: Calculate the amount of water needed to fill the pool to 1/4 foot (3 inches) from the top. Round to the second decimal place.

Answer:

Task 2: The flow rate of water from the garden hose is 2.2 cubic feet of water per minute. Calculate the number of hours and minutes it will take to fill the pool. Round up to the nearest full minute.

Answer:

Task 3: The cost of water is \$0.06 per cubic foot. Calculate the cost to fill the pool.

Answer:

Task 4: The pool owner is considering purchasing a hose with a larger flow rate of 3.0 cubic feet per minute. Calculate the number of hours and minutes it will take to fill the pool using this hose. Round up to the nearest full minute.

Answer:

Task 5: How much faster can they fill the pool using the new hose? Round up to the nearest full minute.

Answer:
